

INSURANCE DIGITAL PLATFORM PROFILE

About Us:

I Link Limited trading as Bima Kwik, is a licensed insurance digital platform in Tanzania. It serves as an intermediary platform for insurance sales and claims notifications, connecting insurance companies, regulators, sales channels, partner networks and insurance customers.

The platform integrates various general, health, and life insurance products, including health, personal accident, motor, and funeral covers for different target markets. It offers a web portal for insurance administrators, a mobile application for referrers and customers. I Link partners with networks to provide insurance awareness and special packages for marginalized individuals.

Our Offer:

We offer an Insurance Digital Platform designed for end-to-end Insurance Sales and Claims notifications. It serves as a core intermediary platform with OMNI CHANNEL access, allowing communication between Insurance companies, regulators, sales channels, partner networks and customers.

Our solution addresses the low penetration of Insurance in the market by providing userfriendly access to customized insurance products. We offer an OMNICHANNEL platform accessible through mobile apps and API integrations to other digital platforms. We also create special insurance packages for targeted markets and partner with them to market and use our platform for transactions and claim notifications.

We are regulatory compliant and connected to TIRAMISS, allowing insurers to interact directly with our platform.

Financial Inclusion Contribution:

Our solution contributes to financial inclusion by providing increased social protection through customized insurance products for community groups, individuals, and businesses. We also contribute to financial inclusion for excluded

groups and women by implementing a revenue sharing model with engaged channels and partners, empowering disabled individuals, women, youth, and SMEs.

Our Revenue Channels:

Our business model generates revenue through commissions on premiums, one-time fees for the white label platform, and annual platform support.

Our primary target is the insurance company which can use our referral model to onboard the referrers and the API integrations to different ecosystems include groups/associations of vehicle owners, women, SMEs, and micro lending group

The Africa situation:

Insurance penetration in Africa is currently less than 3%, despite the potential market of 1.2 to 1.4 billion people. To address this issue, we have developed BIMA KWIK, a core intermediary system that integrates insurance companies, regulators, and other digital platforms through APIs.

This system includes a mobile app for salesforce, which can be used by SMEs, particularly women and youth, to purchase insurance and earn a commission on each transaction. By changing the perception of insurance from an expense to an investment or business opportunity, we aim to increase insurance adoption in the region.

BIMA KWIK provides transparency by monitoring transactions from different channels and facilitating communication between all parties involved. Additionally, it offers claims notifications and ensures compliance with regulatory requirements.

Our solution includes

1. The BIMA KWIK core platform,
2. Admin and insurer web portals,
3. A sales referrer mobile application, and
4. APIs for integration with other digital platforms, insurance company core systems, regulators, payment aggregators, and utility billers.

We offer three sales options:

1. Outright purchase of the core system,
2. White labeling with commission on sales, or
3. Access to the system as it is with the BIMA KWIK brand

The advantages of BIMA KWIK include being licensed by the Tanzania Insurance Regulatory Authority, being a tested and approved platform, and having a fast deployment time.

Our experienced team not only provides the digital solution but also offers business strategy, research, insurance product design, and development. We can also assist with sales projections to demonstrate return on investment.

Overall, BIMA KWIK aims to revolutionize insurance penetration in Africa and help all stakeholders achieve their targets.
